SUMMARY

Senior Software Engineer with 6+ years of full-stack experience building scalable, production-grade systems. Specializes in Java and Node.js backend architectures and Angular frontend applications, with a consistent record of delivering complex IVR solutions on time and at scale. Known for driving technical decisions, mentoring cross-functional teams, and translating business requirements into reliable, maintainable software.

SKILLS

Languages: Java, JavaScript, HTML

Frameworks: Spring Boot, Hibernate, Angular 11+, Node.js, REST API, Microservices.

Tools: Eclipse, VS Code, Postman, Git, CI/CD, AI-assisted Development Tools

Databases: MS-SQL, MySQL, DynamoDB, MongoDB

Cloud: Amazon Web Services & Google Cloud.

Other: Team Mentoring, Agile, System Design, Cross-functional Collaboration

EXPERIENCE

SNUG Technologies Pvt. Ltd.

Senior Software Developer | April 2021 - Present, Gurugram, India

- **Architected and delivered Unimate Dynamic IVR**, a flagship on-premise product for large government and enterprise clients (UIDAI/Aadhaar, IndiGo Airlines, MakeMyTrip, MP Dial 1), enabling non-developers to design IVRs via an intuitive GUI built on Spring Boot and Angular; reduced IVR development and deployment time by 60% through single-click multi-server deployment.
- **Engineered a fault-tolerant reporting and analytics pipeline** that persisted call data as JSON and backfilled the database during downtime, ensuring 100% data retention; integrated call flow tracking, navigation path analysis, and API response monitoring — cutting error investigation time by 50% and boosting user engagement by 40%.
- **Drove performance and infrastructure improvements** by eliminating redundant database calls (30% reduction in page load time) and building serverless AWS components using Lambda, DynamoDB, SNS, SQS, API Gateway, and CloudWatch for scalable, real-time call handling.
- **Mentored 2–3 junior developers** while maintaining architectural consistency and code quality across deliverables, contributing to on-time project delivery across all major product releases.

Spyne

Software Engineer | June 2019 - April 2021, Gurugram, India

- Progressed from intern to Software Engineer within 4 months through strong performance and growing technical ownership.
- Developed and optimized front-end and back-end components for the core product platform using Java and JavaScript.
- Built feature-rich web application modules with Angular 11+, collaborating with designers and product managers in Agile sprints.
- Participated in code reviews and helped establish best practices, contributing to improved overall code quality and maintainability.

PERSONAL PROJECTS

[HypePay](#) | Angular, Node.js | Dec 2025 - Present

- Building a real-time dashboard platform for video game streamers that aggregates live payment alerts from personal payment accounts and chat events into a single unified view — eliminating the need to switch between multiple screens during live streams.

[The Q Experience](#) | Flutter (Android & iOS) | Jan 2025 - June 2025

- Built a cross-platform mobile app in Flutter for travellers on Q Experience group tours, enabling in-group communication and centralised document management (visas, passports) with an offline vault for secure, connectivity-independent access to critical travel documents.

EDUCATION

Bachelor of Technology in Computer Science

CV Raman College of Engineering (CVRCE) • Bhubaneswar, India • 2019
